

## How to easily keep your complete GGU programs up to date with the latest versions

Our two GGU software complete installations, which can be downloaded from our ESD website (<https://www.ggu-software.com/en/ggu-software-edelivery>), can now also be installed alternatively via the Windows package management system "Chocolatey" (<https://chocolatey.org>):

- ggu-software : German version (D-A-CH)
- ggu-software-international: Englisch version (INTERNATIONAL)

To automatically install one of the two GGU software installations mentioned above via Chocolatey, proceed as follows:

- 1) It is essential to uninstall any existing complete installation of GGU software via the Windows Control Panel.
- 2) Open a MS-Windows "PowerShell" window as administrator ("run as administrator").  
**IMPORTANT:** Please do not start the normal shell of Windows, but make sure to use the PowerShell (blue background !!).
- 3) Install Chocolatey by submitting the following entry in the PowerShell window:

```
Set-ExecutionPolicy Bypass -Scope Process -Force;  
[System.Net.ServicePointManager]::SecurityProtocol =  
[System.Net.ServicePointManager]::SecurityProtocol -bor 3072; iex ((New-Object  
System.Net.WebClient).DownloadString('https://chocolatey.org/install.ps1'))
```

For more information, please visit: <https://chocolatey.org/install>

- 4) Optional: In the PowerShell window with administration rights, you can search for the packages:

```
choco search ggu  
choco search ggu-software  
choco search ggu-software-international
```

- 5) To install the GGU software, enter one of the following commands in the PowerShell window and confirm it with the return key:

```
choco install ggu-software -y  
or  
choco install ggu-software-international -y
```

6) To uninstall, if necessary, enter one of the following commands in the PowerShell window:

```
choco uninstall ggu-software -y  
or  
choco uninstall ggu-software-international -y
```

7) Upgrade your GGU complete package using one of the following commands. When upgrading, the old version is automatically removed and replaced with the current version..

```
choco upgrade ggu-software -y  
or  
choco upgrade ggu-software-international -y
```

8) Subscribe to the Chocolatey Newsletter under "Step 1" on the following website:

<https://chocolatey.org/install>

9) Alternatively, the installation of subsequent GGU complete installations (updates) can now also be used via the graphical interface with the Chocolatey GUI program. To do this, proceed as follows:

Enter the following command in Powershell:

```
choco install chocolateygui -y
```

Now start the Chocolatey GUI program as administrator. Everything else will then be self-explanatory.
